

My love for historic places and buildings started way back when, when my family traveled to see historic sites and museums throughout the Midwest and Mid-Atlantic. I loved visiting places from the past and being curious about what it was like to live in other times; I wondered how those historic structures were being used today.

Now, I lead Entech's Facilities Planning and Design and Corporate Marketing groups, and serve as President of Entech Architectural Services, Inc.

Even though all these titles don't actually all fit onto a business card, I can sum up what I do this way: I work with a diverse team of professionals, including engineers, architects, planners, solutions developers and marketing staff, to answer our client's questions about how to plan for the preservation, maintenance, renovation or adaptive reuse of their campus and historic buildings.

I especially enjoy helping our clients further the missions of their organizations through stewardship of their campus and buildings. We do this by integrating historic, condition, energy, utility and asset data into the facilities management and sustainability planning process. My team and I take on the challenge of providing our clients with options for approaching proactive, financially feasible plans, and I personally work to enrich our client's leadership skills as they navigate complex and critical decisions with their teams. When I'm not working, I still like to take road trips with my family to visit historical places, and study the building's history and current uses.

If you have a beloved campus or historical building that you'd like to know more about planning, preserving, maintaining, renovating or adapting its use for, please reach out to me. (Or, if you have a favorite historical site that you've visited and recommend, I'd love to hear about it!)

My specialties: historical preservation, condition assessments, feasibility studies; adaptive reuse, sustainable design
